Logistics & Automation Solutions

Step by step

towards growth

SensoRegistration

■ Reducing errors and optimising efficiency

Processes in laundering facilities are generally aimed at error reduction and minimising administrative processing. Registering all incoming items gives an insight into your customers, allowing you to even better respond to their needs. This concerns personal data, history of items, missing pieces and wash cycle numbers. Linking these registration data to the financial records limits the administrative processing and errors in your laundering facility to a minimum.

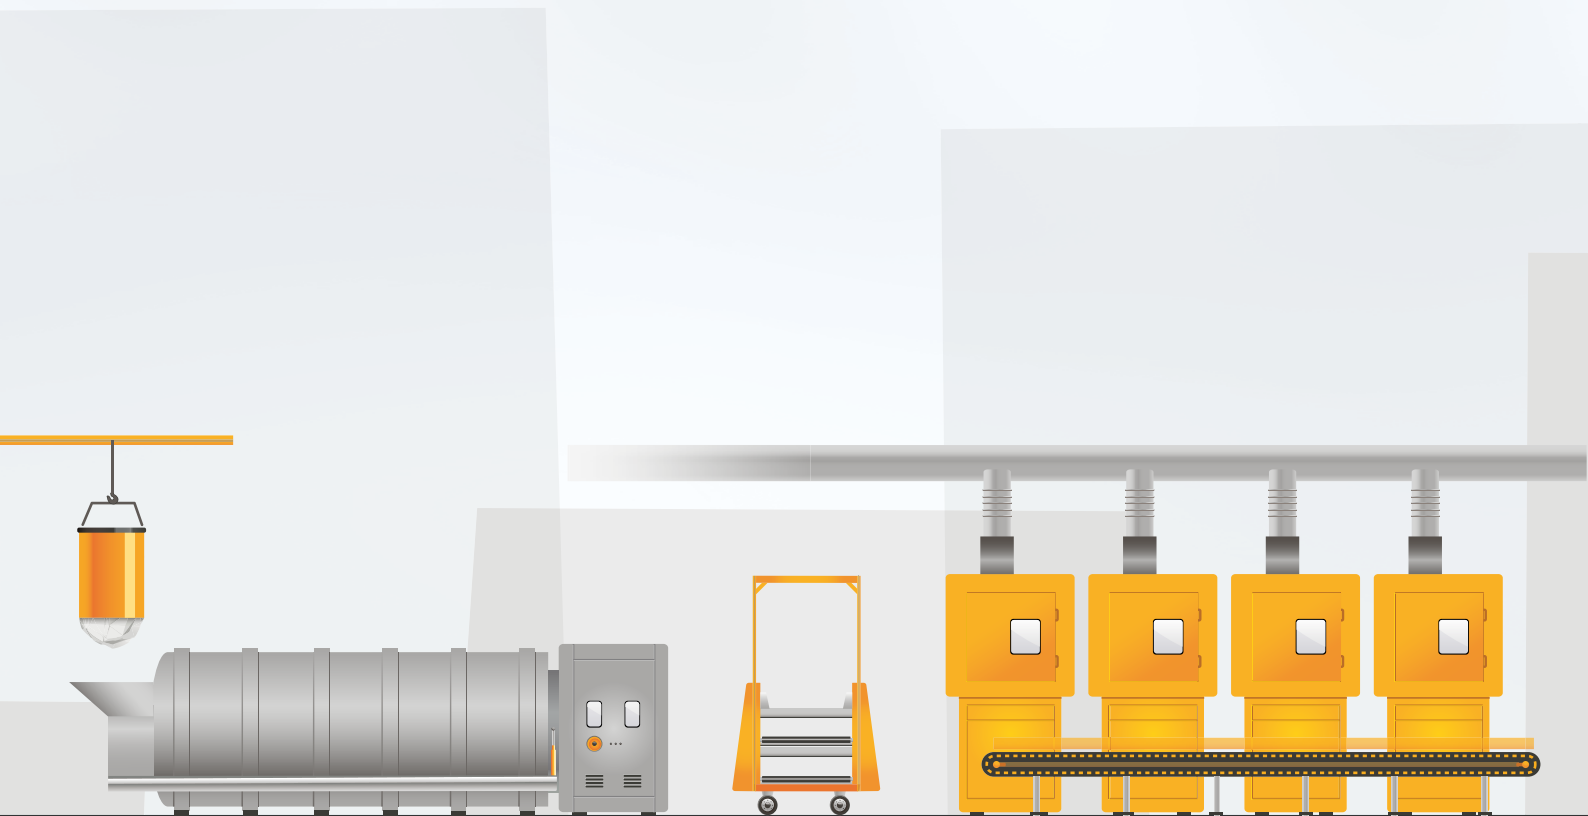

- Registration by scanning in and out
- Registration using bar code and RFID tag
- Linking accounting software

SensoConveyor

■ Increasing productivity with efficient logistics solutions

In the past few years, efficiency of internal transportation in laundering facilities has significantly increased, but gains are still possible. Textile cleaning companies and suppliers must continue to search for methods increasing their productivity in order to achieve higher profitability. This production increase is achieved by transporting products more efficiently from A to B in a quick, reliable manner. The additional benefit is saving space and a more efficient logistics process.

- Optimal flow
- Saving space
- More overview

SensoControl

■ Reliable and sustainable machine control

In a laundering facility, business continuity is of key importance. A reliable and stable control system is a requirement for optimal performance of your production process. In the context of sustainability, extending the economic life of your machine fleet is an additional, rather important part of your business management. SensoControl is a user-friendly and reliable control with 24/7 deployment.

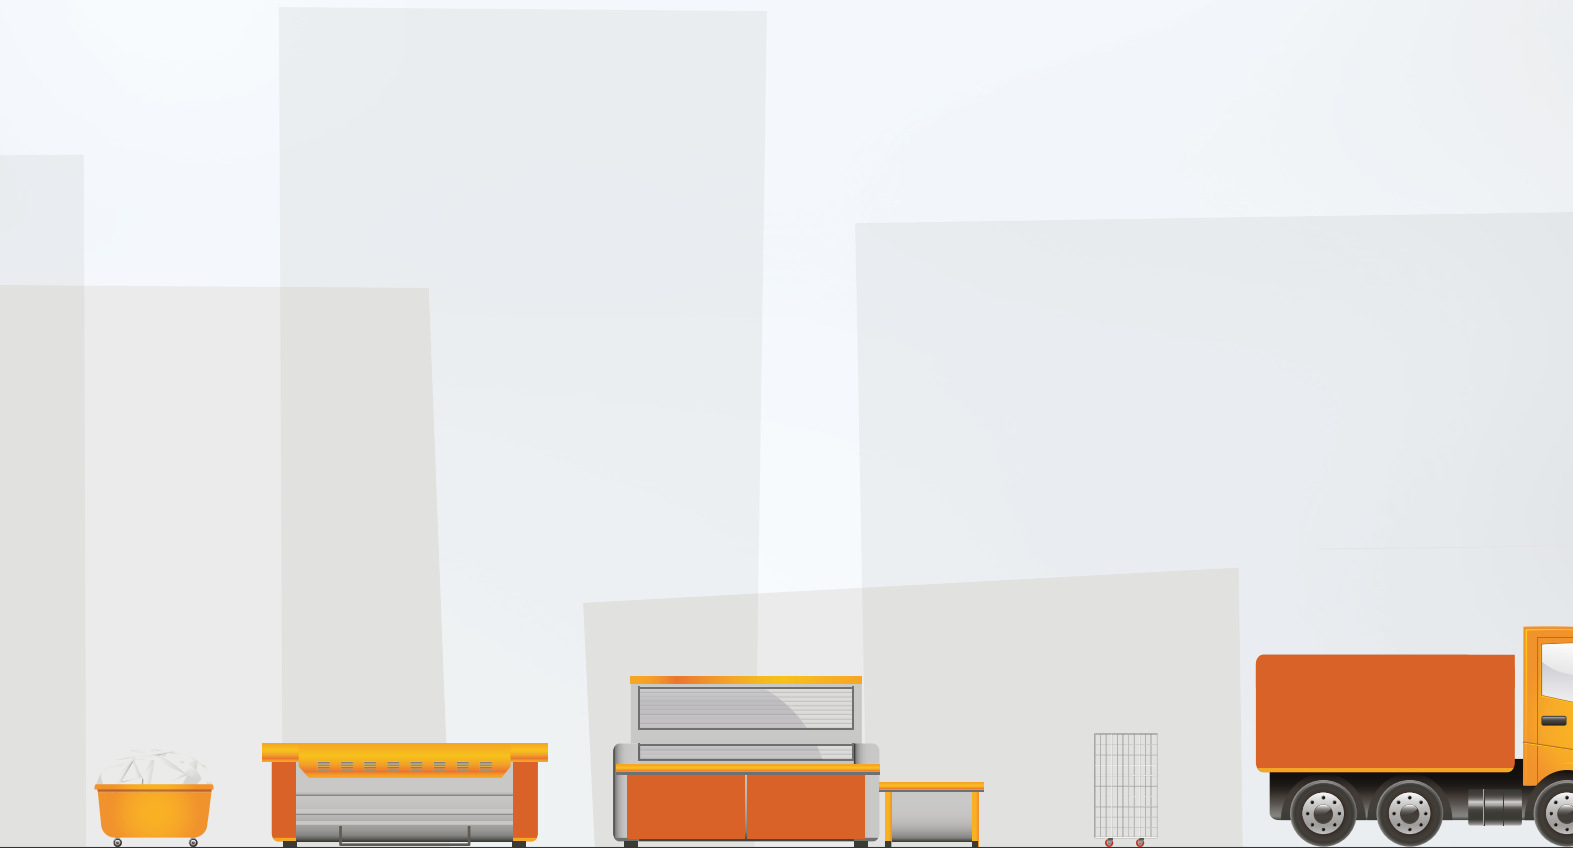

- Very stable controlling
- Up to date technology
- User-friendly
- Multi-lingual

SensoView

■ Your laundering facility at a glance

Within the process and production automation, process visualisation is of vital importance. Clear insight into the various items and production flows eventually leads to higher productivity. Visualisation of the various production flows provide a clear overview and give a clear picture within your laundering facility. The reporting module provides a specific insight into the various production flows and customers. This information can be used to further optimise the process.

- Dynamic production overviews
- Real-time management information
- Continuity

SensoInsight

■ Straight-forward cost management and determining cost price

Easy insight into consumption, productivity and utilisation rate of your machine fleet. This information allows for more insight into the cost and revenue per customer. This information and energy statistics enable clear insight into the fixed and variable costs. All this information combined provides a clear overview of where any cost savings can be made, improving your profitability position.

- Benchmark
- Saving costs
- Better competitive position

Sustainable business management

Aiming for great results in a sustainable way is the basis of continuity and long-term survival of your business. Structural economic benefits cannot be achieved without attention to social and ecological developments.

Investing in the future is inextricably linked to Senso Technics' strategic policy and management. Encouraging developments in our field of work takes a central place within the organisation. We do this by actively participating in various industry and sector associations, among other things.

As a supplier to the laundry industry, Senso Technics provides a series of solutions enhancing their customers' sustainable business management. Reusing machines and monitoring energy consumption are specific examples.

Production efficiency and cost reduction

The main challenge for textile cleaning companies is efficient use of production resources and obtaining the right management information. Optimising your production process is a source of potential gains. All processes can be improved, leading to greater effectiveness and higher efficiency. The solutions and control systems that Senso Technics offers worldwide are aimed at efficiency and cost reduction.

Senso Technics is a specialist in control systems and logistics solutions for the laundry sector. Boasting over 20 years of experience, Senso Technics develops visualisation and registration software, machine controls and hanging conveyor systems. The support department employees who are available 24 hours a day and consultants providing customised advice and training to your employees make all the difference.
